

# Get the whole picture

**Korebalance iVNG adds diagnostic capability to better target balance improvement and fall and fracture reduction programming.**

**The Korebalance iVNG can identify nystagmus and help differentiate vestibular vs. proprioceptive issues, resulting in a better rehab plan, better outcomes, and better substantiated medical necessity.**

- **Testing in as little as 10 minutes**
- **Interpretive report generated immediately after completion of test**
- **39 Standardized tests**
- **World class accredited training**
- **iVNG professor automated voice and video instructions**
- **Goggles are very light, accommodating individuals with limited neck strength**
- **Patented dual infrared cameras for accurate tracking**
- **ExacTrak™ Toolset allows tracking of the most complicated cases- including ptosis (droopy eyelids).**

**FDA recognized with generous third party and Medicare reimbursement. The iVNG ties seamlessly into the Korebalance rehabilitation program providing a Total Solution to balance assessment and treatment.**
